PRODUCT FEATURES

ADVANCED MPU

The new MPU revolutionizes the way the CDJ is driven, making it work in a smoother, more stable way than any of its predecessors. Tracks and Hot Cues load faster than ever. Its processing power has enabled the introduction of exciting new functions and gives scope for the addition of more features via future updates.

OUR SMOOTHEST-EVER JOG WHEEL

The redesigned mechanism inside the jog wheel feels slicker than any CDJ before, making scratching and pitch-bending effortless with a reduced touch latency.

ENHANCED AUDIO DESIGN

Internal audio calculation processing is unified to 96 kHz/32-bit floating in all playable audio formats. The unit captures the subtleties of the original sound source – including depth, ambience, and even slight changes in the timbre of the low range – for a more realistic spatial sound and a more musical bass sound.

FLEXIBLE PERFORMANCE OPTIONS

The unit can play rekordbox-analyzed music from USB drives via Export mode. Or, with a laptop connected, Link Export and free use of Performance mode are available via USB-HID control. An iPhone can also be plugged into the unit via a USB cable with a Lightning to USB3 Camera Adapter (sold separately), for mixing with the iOS version of rekordbox.

9-INCH, HIGH-RESOLUTION TOUCH SCREEN

The touch screen is bigger and clearer than the one on the CDJ-2000NXS2 and features extra information, shortcuts, and buttons for frequently used categories and functions, such as Playlist and Search. Touch Preview, Touch Cue, Stacked Waveform, and support for 3Band Waveform are among the exciting new features.

PRO DJ LINK WITH GIGABIT ETHERNET AND ENHANCED LIGHTING SUPPORT

you can share and play audio files from USB devices and SD cards on up to 6 CDJ-3000 units when you combine them with a compatible 6-channel mixer such as the DJM-V10. The multi player can also sync sounds with lights thanks to compatibility with the new Pro DJ Link Lighting feature when using rekordbox (PC/Mac) and the RB-DMX1 (available separately).

^{*1} To use the CDJ-3000 with your iPhone, you'll need a Lightning to USB3 Camera Adapter, available separately. ^{*2} Not available in some regions.
