PERFECT FIT IN THE DJ BOOTH

The DJS-1000 is designed to fit perfectly alongside the CDJ-2000NXS2 and DJM-900NXS2, creating effortless unity in the DJ booth.

PRODUCT FEATURES

1 7-INCH FULL-COLOUR TOUCH SCREEN

Tap the LCD display to instantly access the Home, Sequence or Mixer screen.

2 LIVE SAMPLING

Easily sample input sounds from any audio source via your mixer and immediately use them as individual tracks. The sampled sounds are automatically synchronised with the current sequence to play in a loop.

3 FX

Add various FX to tracks with ease, changing the tone on the fly. You can apply FX such as echo, reverb and filter to individual tracks, a group of tracks, or all tracks.

4 TOUCH STRIP

By touching the strip, you can quickly change the pitch when using the pitch bend feature, or play a drum roll by using the note repeat feature. Customise parameters for even more creative options.

5 ACCURATE SYNCING

In addition to clock synchronisation with MIDI devices, the DJS-1000 includes the Beat Sync function, which can synchronise a performance by beat/bar with a track playing on a CDJ-2000NXS2 or XDJ-1000MK2 set-up using PRO DJ LINK.

6 16 MULTICOLOURED PERFORMANCE PADS

Trigger the tracks you've assigned samples and loops to. Each pad is equipped with multicoloured illumination and highly accurate velocity detection, so you can increase or decrease volume with the amount of pressure you apply.

7 STEP SEQUENCER

Easily create a new groove by tapping the 16 large, multicoloured step input keys. You can keep an eye on sequence information on each track thanks to the keys' changing colours.

SUPPORT FOR DJS-TSP PROJECT CREATOR

Easily create projects and Scene files on a PC/Mac using the DJS-TSP Project Creator application.
